

**OCS Life Sciences' Mapping Engine is software that is developed with a single purpose in mind: making the conversion of clinical data faster, easier, and cheaper.**

# MAPPING ENGINE

CDISC DATA CONVERSION  
DONE FASTER

Through its ingenious design the Mapping Engine translates specifications into SDTM datasets without any further programming, effectively eliminating one of the most time consuming steps in the process of generating submission ready datasets. Built using just SAS® programs it has zero client footprint.

## **MOST IMPORTANT BENEFITS**

- Completely customisable to your specific needs
- Minimal to no programming required
- Up to 100% reuse of work for next studies
- Zero client footprint, no installation required
- Easy to learn and use

*“The Mapping Engine reduced our development effort by up to 60% per study!”*
